

Chocolatey Install, Git Install, Repository Clone Instructions

Navigate to <https://chocolatey.org/> and click the blue Install Chocolatey Now button. Follow the Default Install Wizard settings to make it easy, unless you're Pro and care to Customize to your needs.

Install Chocolatey Now

Steps outlined:

- 1) Open Powershell as "Run as Administrator"
- 2) Copy paste the following:
Set-ExecutionPolicy Bypass -Scope Process -Force; iex ((New-Object
System.Net.WebClient).DownloadString('https://chocolatey.org/install.ps1'))

Once Chocolatey is installed, restart your computer and open Windows Powershell. Run the following command from the command line:

```
C:\> choco install git
```

This will automatically install and set up git. Now you're ready to clone the Dovetail App repository.

Prepare a directory that's easy to navigate to and easy to find (I would suggest something along the lines of Documents/CS481-Dovetail), and in this directory run:

git clone <https://github.com/BoiseState/dovetail.git>

It's as easy as that, now you've got the current working repository to run and build as you please. Have fun!!!
